

Dynamic Business and Medical Systems (DBMS Health)

Revolutionizing the healthcare industry.

Setting standards for the future.

Our Mission:

At DBMS Health, our mission is to EXCEED YOUR EXPECTATIONS by providing excellence and innovative care management services and technology solutions. Our combined suite of integrated programs, resources, and innovated technology are designed to help you reduce health risks and improve the health of your patients/members while reducing your overall healthcare costs.

We provide comprehensive health management technology services, life cycle Data Center Migration, support, and solutions through our integrated suite of software products. We believe that, in order to provide the best healthcare technology services there must be dynamic integration of information and tools.

As a team, it is our goal to exceed our customers' expectations daily and provide a tool to help them achieve an ACO (Accountable Care Organization) & Meaningful Use model.

DBMS Health is a company built for success. Established in Indianapolis, Indiana in 1993, DBMS Health provides technology solutions to meet evolving healthcare needs. DBMS Health develops, improves, and consistently advances the health care industry with our multilingual, Universal Electronic Medical Record (UEMR), and our Integrated Care Management System (ICMS). With over 90 conditions and assessments and utilizing over 180 physicians, nurses and IT professionals, our ICMS system help organizations achieve an ACO and Meaningful Use model. Our system takes a holistic approach to patient care and promotes transparency and accountability within an organization.

We evolve and expand constantly in order to exceed our customers' expectations daily. Please visit us at www.dbmshealth.com for the latest information about our company, products, and how we can assist you with your healthcare technology needs.
